Directions: Write the correct equation and solve.

1. If 24 elements are equally distributed into six groups, how many elements are there in each group?

   Equation :

2. XV elements divided by III elements in each set, how many sets are there?

   Equation :

3. The divisor is 6 and the dividend is 36, what is the quotient?

   Equation :

4. What is the quotient if the divisor 5 ones and the dividend is thirty?

   Equation :

5. There are 48 elements. If there are 6 elements per set, how many sets are there?

   Equation :

6. The dividend is 3 tens + 6 ones and the divisor is IX. What is the quotient?

   Equation :

7. The total number of elements is 28. If there are 7 equal sets, how many elements are there in a set ?

   Equation :
