DIRECTIONS: Read each problem. Use the model for each. Label and encircle your final answer

1) Donnie and Carlo went running at the park. Donnie ran 1 435 meters. Carlo ran thrice as far as Donnie. What was the total distance that Donnie and Carlo ran?

2) Gavin aimed to make a giant house of cards. He had 958 pieces playing cards. His dad gave him a deck of cards to add to his own cards. After he built his house of cards, 104 cards were left. How many playing cards were used? (1 deck of cards = 52 pieces)

3) Ethan walks 3 times around a rectangular lot a day. The long side of the lot is 8 meters and the short side of the lot is 6 meters. If he does this from Monday to Friday, what would be the total distance that he walks?
