DIRECTIONS: Answer the word problem. Use a model if necessary. Simplify your answers to its lowest term.

1. Miguel used half of his money to buy a book. Of the remaining money, he gave two-thirds to his brother. He was left with Php65.00
 - a) How much money did he spend on the book?

 - b) How much money did he have from the start?

2. Rod A is a third as long as Rod B and a quarter as long as Rod C. The total length of the three rods is 56 meters.
 - a) How long is Rod B?

 - b) How much longer is Rod C than Rod B?

- c) Mr. Cruz had $2\frac{1}{3}$ kg of sugar. He used $\frac{1}{2}$ kg and placed the remaining sugar equally into 3 containers. How much sugar was in each container?
