DIRECTIONS: Solve the word problem. Draw a model if necessary. You may use a calculator.

1) The price of one kilogram of rice today is Php40. Last week, its price was Php38. Find the percentage increase in price.

2) A glass contained 60 ml of water. Danny poured 24 ml of the water out. What percentage of the water was left in the glass?

3) Mark paid Php350 for a memory card. The price already included 12% tax.
   a) What was the price of the memory card without the tax?

   b) How much did Mark pay for 12% tax?
